Rubber Wheel Stop Features

1. High density long lasting rubber (does not break up like alternatives)
2. Fixing holes sizing suitable for concrete or bitumen slabs
3. 100% Australian Standards size compliant
4. UV protected rubber and reflective
5. Hi-Vis reflective strip with high-bond adhesive
6. Heavy weight 14kg

Concrete Wheel Stop Features

1. Lower height to suit all vehicles
2. 100% Australian Standards compliant
3. Flat front to stop vehicle mounting
4. Larger fixing points
5. Reinforced concrete
6. Extra wide base for stability
7. Bevelled edges to stop tipping

Black / Yellow Rubber Wheel Stop

Black / Yellow Rubber Wheel Stop

1.65m Concrete Wheel Stop

1.65m Concrete Wheel Stop

Premium Rubber Wheel Stops

- Size: 1650(L) x 100(H) x 140(W)mm
- Weight: 14kg

✓ Complies with AS2890.1-2004

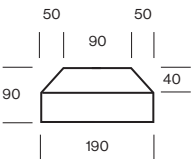

code	description	1-9	10-49	50-99	100+

08-GBM16110	Galvanised M16x110mm Sleeve Anchor with Washer (8 required per wheel stop)	\$4.20 / ea

How to install Rubber Wheel Stops

Preparing for Installation

To ensure a smooth installation process, preparation is crucial:

- Choose the Right Rubber Wheel Stops: Confirm they meet Australian standards (AS2890.1) for dimensions and placement. Rubber wheel stops are ideal for asphalt or concrete surfaces due to their flexibility and durability.
- Gather Tools: You'll need a hammer drill with masonry bits, chalk or a marker, bolts or spikes (provided with the stops), a wrench or socket set, and optional epoxy adhesive for added stability.
- Check Placement: Review placement guidelines to ensure proper spacing and alignment for safety and effectiveness.

Installation on Asphalt (Bitumen)

1. Clean the installation area.
2. Position the Wheel Stop or Template: Align the wheel stop according to AS2890.1:2004 guidelines, ensuring it is positioned 900–1100mm from the front edge of the parking space.
3. Drill pilot holes: Use a hammer drill with a Ø10mm bit to drill pilot holes through the fixing holes in the wheel stop or template, just penetrating through the bitumen layer.

4. Clean the area again.
5. Add adhesive (optional): Apply sealant adhesive to the underside of the wheel stop and into the pilot holes in the bitumen.
6. Secure the wheel stop: Position the wheel stop and hammer in M12 x 300mm galvanised fasteners, ensuring the heads are seated correctly in the recessed areas.

Installation on Concrete

1. Clean the area: Ensure the installation area is free from debris.
2. Position the Wheel Stop or Template: Align the wheel stop according to AS2890.1:2004 guidelines, ensuring it is positioned 900–1100mm from the front edge of the parking space.
3. Drill pilot holes: Use a hammer drill with a Ø10mm bit to drill pilot holes approximately 50mm deep through the wheel stop or template.
4. Drill final holes: Move the wheel stop or template aside and enlarge the pilot holes to Ø16mm and approximately 90mm deep.
5. Extract dust and clean again: Remove dust and debris from the drilled holes.
6. Add adhesive (optional): Apply sealant adhesive to the underside of the wheel stop.
7. Secure the wheel stop: Position the wheel stop and fasten it with M16 x 145mm D-bolts and washers, ensuring the tops of the fasteners are seated correctly in the recessed areas.

Which Speed Hump is best for me?

Speed humps are essential for slowing traffic and improving safety—but choosing the right material can be tricky. Here's a quick guide to help you decide between steel, rubber, and plastic speed humps based on your needs.

Steel Speed Humps

Built for: Heavy-duty environments like warehouses, industrial sites, and busy roads.

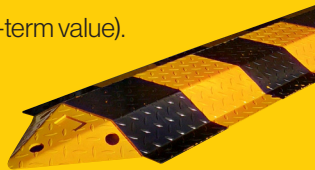

Advantages:

Extreme durability — Handles frequent heavy vehicles.
Long lifespan — Galvanised or powder-coated for rust resistance.

Secure install — Bolted down for maximum stability

Considerations:

Higher upfront cost (but long-term value).
Noisier under traffic.
Not easy to relocate

Plastic Speed Humps

Built for: Residential driveways, private roads, temporary setups, or light commercial use.

Advantages:

Lightweight & low-cost – Easy to install and move.
Weather-resistant – Doesn't rust or corrode.
Customisable – Various colours and modular designs available.

Considerations:

Not suitable for heavy vehicles.
Can wear or crack faster.
Must be securely anchored.

Rubber Speed Humps

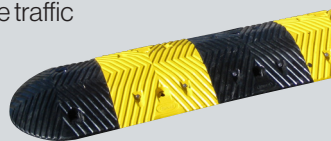

Built for: Car parks, shopping centres, schools, and low-to-medium traffic roads.

Advantages:

Noise dampening – Softer impact means quieter operation.
Good visibility – Often includes bright reflective markings.
Quick install – Modular and easy to adjust or remove.

Considerations:

Wears faster under heavy loads.
May degrade under long-term UV exposure.
Not ideal for industrial-grade traffic

Which One Should You Choose?

Steel: For long-term, high-impact industrial use.

Rubber: For a flexible, quieter option in community or retail settings.

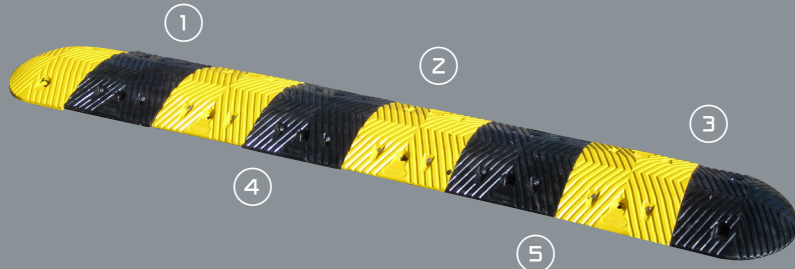

Plastic: For low-traffic zones or temporary installations.

Choosing the right speed hump helps manage traffic flow, protect pedestrians, and extend site longevity. Need help picking the right one? Contact our team today for expert advice.

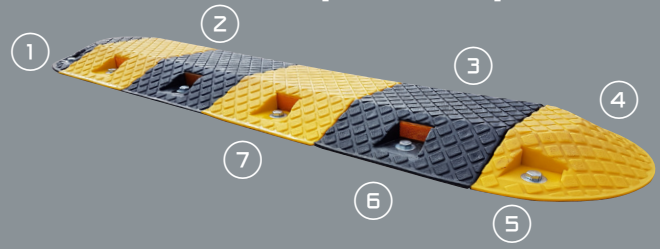

Let me know if you want a version with your branding or product links embedded.

Rubber Speed Hump Features

1. UV resistant for colour consistency
2. 'Easy ride' profile
3. Inset reflectors for night visibility
4. Flexi Rubber for uneven surfaces
5. Heavy Duty

Plastic Speed Hump Features

1. Recyclable HDPE
2. 100% Australian Standard Compliant
3. Heavy duty moulded plastic construction
4. Reinforced honeycomb core
5. Concealed fixing points
6. Inset reflectors for night visibility
7. Flat sides for effective speed control

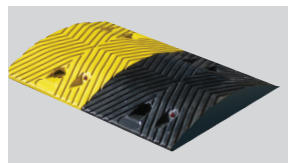

Heavy Duty Solid Rubber Speed Hump For Cars & Trucks

- Material: Solid heavy duty rubber/PVC combination
- Size: 500(L)mm x 350(W)mm
- Weight: 15kg per metre

03-SRS-B	Black modules	\$25.50 / ea	\$23.90 / ea

Premium Steel Speed Hump Features

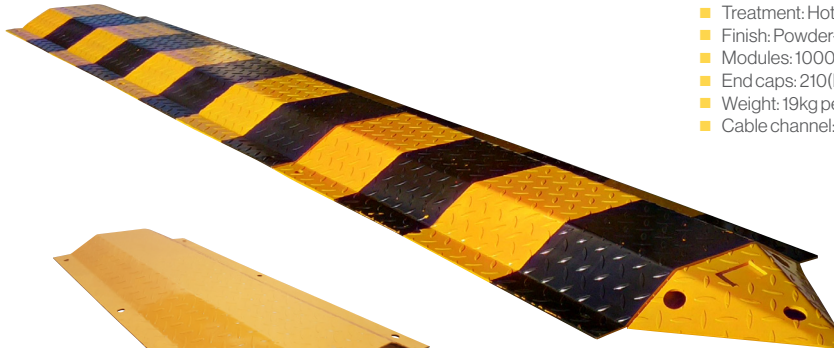

1. Heavy 5mm Wall thickness
2. Stronger Flanged mounting points
3. 100% Australian standard compliant
4. Powder Coated Black Sections (not sprayed over)
5. Powder Coated Yellow Sections
6. Large cable channel
7. Double reinforcing gussets
8. Individual 1m modules
9. Flush gussets prevent leverage on fixings
10. Cable channel
11. Wider footprint makes more secure fixings

Steel Speed Hump 3mm Plate

- Material: 3mm steel plate
- Treatment: Hot-dipped galvanised
- Finish: Powder-coated checker plate
- Modules: 1000(L) x 450(W) x 60(H)mm
- End caps: 210(L) x 343(W) x 56(H)mm
- Weight: 19kg per metre
- Cable channel: 30(H) x 65(W)mm

Expansion Joint Cover Features

- 1. Slotted holes
- 2. 5mm plate thickness
- 3. Hot dip galvanised — never rusts
- 4. Humped option for cable access or waterproofing protection
- 5. Checker plate option provides slip-resistance
- 6. Flat area around slots for free movement
- 7. Humped smooth
- 8. Flat checker
- 9. Noise silencing
- 10. Rubber underlay
- 11. 4.5mm thick
- 12. 2-ply reinforced to ensure it won't break down
- 13. Rubber is standard with all covers
- 14. Correct density to withstand friction

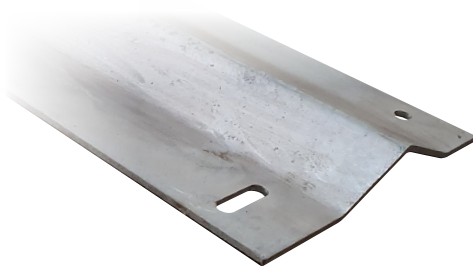

Correct fittings supplied with cover

Fixed Steel Bollards - Yellow - In-ground - 90mm (See Page 25)

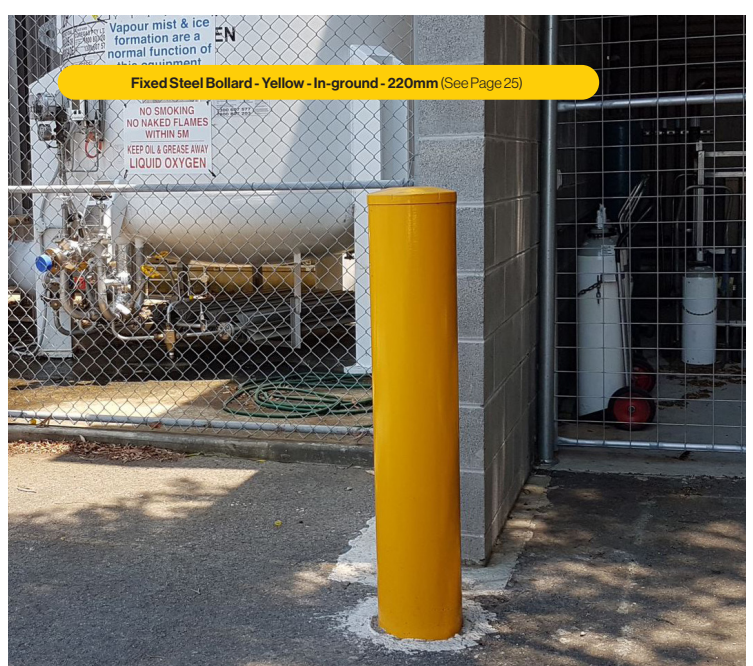

Fixed Steel Bollards - White Satin - In-ground - 140mm (See Page 25)

Fixed Steel Bollards - Yellow - Base Plate - 140mm (See Page 24)

Steel Bollards - Galvanised - Base Plate - 140mm (See Page 28)

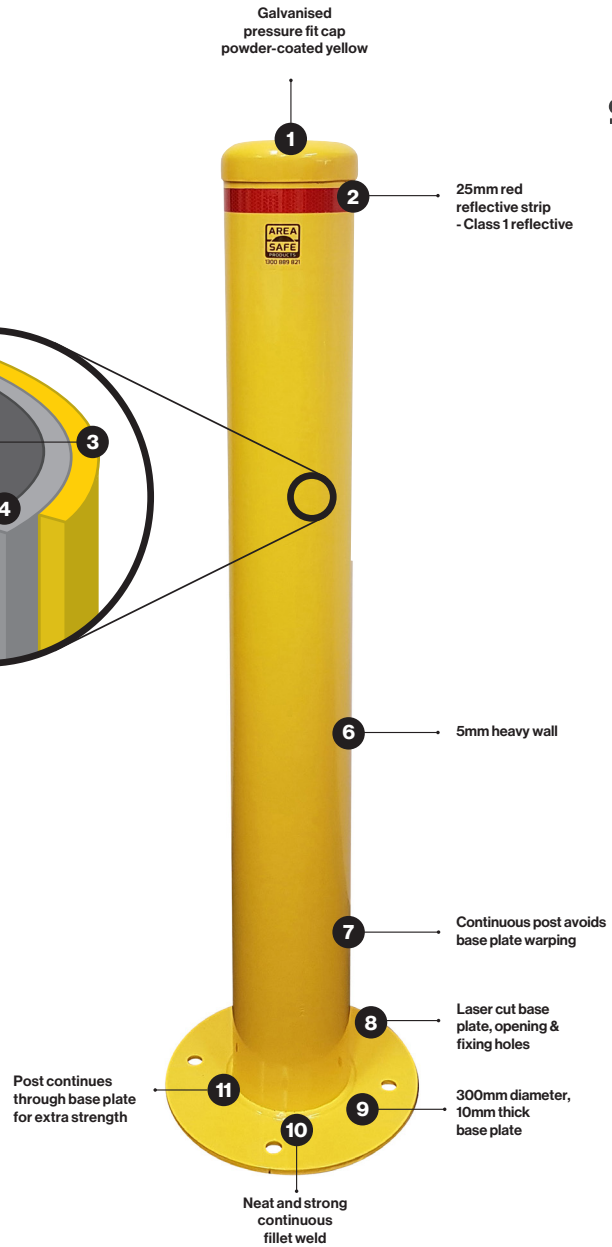

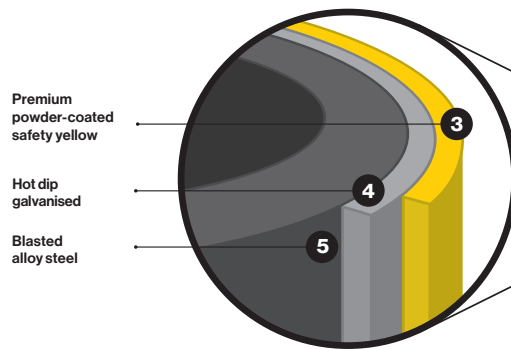

Fixed Steel Bollard - Yellow - In-ground - 220mm (See Page 25)

Area Safe steel bollards are essential for separating pedestrians from vehicles and for protecting property. Bollards are a legal requirement for accessible parking shared zones and for preventing obstruction of fire egress doors. Standard powder coat colour is safety yellow — other colours made to order (please enquire).

- **Optional chain rings available**
- **Standard colour is safety yellow**
- **Other colours available - See Pages 18-19**
- **Custom bollards - POA**

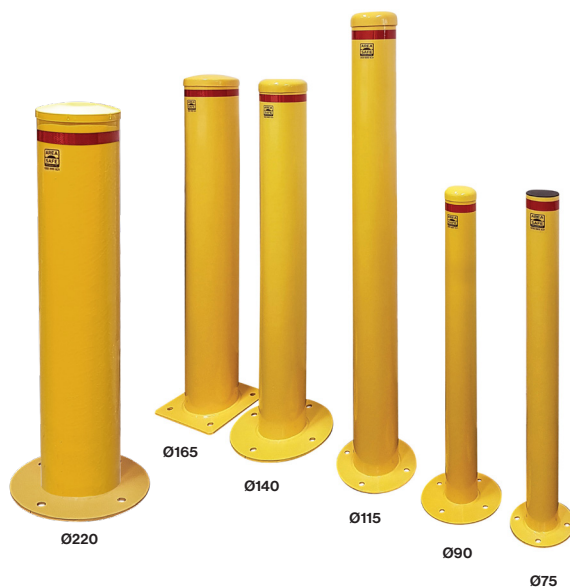

Area Safe Premium Bollards		
✓	Galvanised pressure fit cap powder-coated yellow	1
✓	25mm red reflective Strip - class 1 reflective	2
✓	Premium powder-coated Safety yellow, gloss	3
✓	Hot dip galvanised	4
✓	Blasted alloy steel	5
✓	5mm heavy wall	6
✓	Continuous post avoids base plate warping	7
✓	Laser cut base plate, Opening & fixing holes	8
✓	300mm diameter, 10mm thick base plate	9
✓	Neat and strong 3mm CFW electronic weld	10
✓	Post continues through base plate for extra strength	11
