SPECIALITY
CATALOGUE #40

Surex Pedestrian Rail Kits	4	Machine Guarding	41
Modular Fencing	7	Downpipe Guards	46
Surex Gates and Barriers	15	Surex Low Recessed Rails	49
W-Beam Guard Rails	22	Steel Truck Loading Dock Reversing Guides	50
Driver Safe Zone Kits	29	Corner Guards	51
U-Bollards	30	Rubber Guards	53
Swing and Boom Gates	32	Rubber Protectors	54
Loading Dock Stairs	39	Document Holder	55

Pedestrian Rail Features

1. High quality gloss safety yellow powder coat
2. Easily customisable
3. Heavy duty customisable cast fittings
4. Modular construction - easy install & repair
5. Heavy duty 48mm gal pipe

✓ We can powder coat the colour to your specific colour requirements

Surex 'Recessed Rail' Barrier Features

1. Premium safety yellow powder coat
2. Optional compliant handrail
3. Heavy wall steel post & rail
4. Recessed rail attachment for extra strength
5. 4 size options
6. Optional kick plate
7. Non-trip base plates
8. Full galvanised - no rust!

Surex Polymer Flexible Warehouse Barrier

Protect critical infrastructure and personnel with the Surex Polymer Flexible Warehouse Barrier. Designed for demanding warehouse environments, this modular system absorbs forklift impact without damaging floors, preserving your concrete and safety investment.

- Flexible polymer design absorbs impact without pulling out anchor bolts or damaging concrete
- Modular system easily configures to suit any warehouse layout or application
- Provides low-level protection for racking, walls, and pedestrian zones
- Bright safety-yellow finish enhances visibility and reduces collision risk

code	description	1+

Surex Polymer Flexible Warehouse Barrier Features

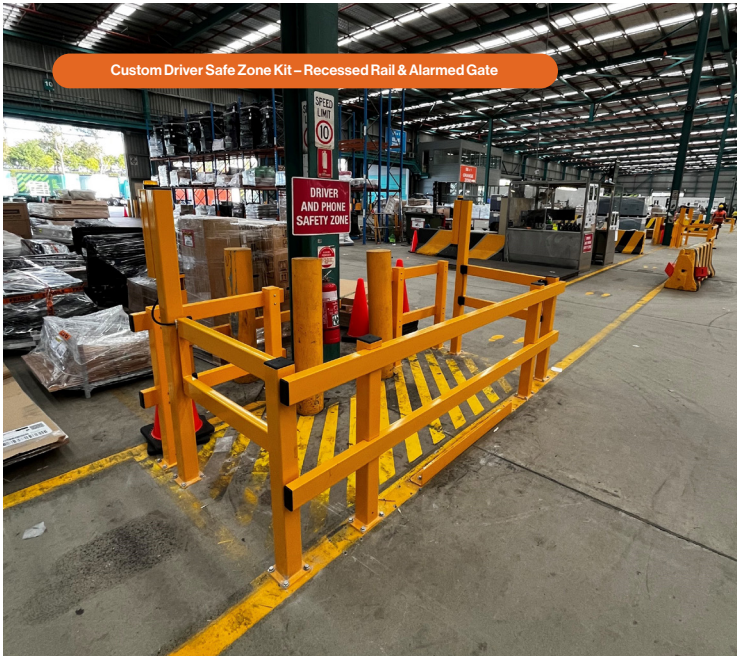

1. Impact-Absorbing Design
Dual-layer build cushions and disperses low-speed impacts to protect people and assets.
2. Flexible Polymer Construction
High-grade polymer flexes on impact, reducing floor and anchor damage versus rigid barriers.
3. Internal Rib Reinforcement
Internal ribs boost strength while maintaining energy absorption.
4. Heavy-Duty Crossbar Protection
Oversized rails create a solid divide between pedestrians and vehicles in busy zones.
5. Visual Safety Cue
High-visibility yellow aids driver and pedestrian awareness.
6. Modular Layout Options
Mix and match components to fit any warehouse or factory layout.
7. Floor-Friendly Anchoring
Rubber energy buffer and fixed bolts minimise concrete damage on impact.
8. Forklift-Tested Durability
Withstands direct forklift hits, absorbing thousands of joules without permanent set.
9. Optimised for Low-Level Hazards
– Ideal height blocks pallet jacks and forks from equipment and walkways.
10. Warehouse Safety Upgrade
Smart add-on for logistics and manufacturing to cut accident-related downtime.

12-SMS20-SLGT-Y	Yellow with heavy duty hinges and lockable latch 1240(H) x 1020(W)	\$1,990.00 / ea

How to ensure a safe pallet racking system in industrial environments

In industrial settings, pallet racking systems play a critical role in efficient storage and organisation. However, maintaining the safety of these structures is equally essential to prevent accidents, protect inventory, and ensure a safe workplace. In this article, we'll outline key practices and considerations for creating and maintaining a safe pallet racking system in industrial environments.

Start with quality materials and professional installation

The foundation of a safe racking system lies in the materials used and how it's installed. Choosing high-quality steel racking that meets Australian Standards (AS4084) is vital. This ensures your racking system can handle industrial demands and supports long-term stability. Professional installation by certified experts is also crucial, as it guarantees correct placement and structural integrity, reducing risks from the outset.

Regular inspections and proactive maintenance

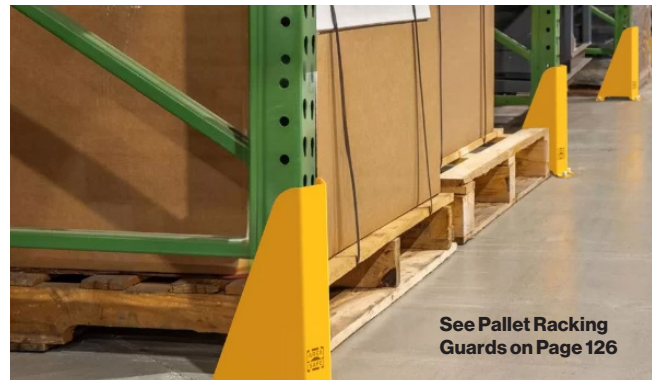

Frequent inspections play a critical role in catching issues early. Regular checks can help spot any signs of damage, such as loose bolts, bends, or cracks. If any issues are detected, it's essential to carry out repairs immediately to prevent further damage or failure. Consistent maintenance, including checking for corrosion and worn parts, will keep the racking in top condition and extend its lifespan.

Load compliance and safe forklift operation

Marking load capacities on racks and educating staff on these limits helps prevent overloading, which is a common cause of racking collapses. Additionally, staff should practise balanced loading, ensuring weight is evenly distributed to avoid excessive stress on beams. Forklift operators should receive specialised training to load and unload racking safely and to drive cautiously near racking systems to avoid accidental collisions.

Safety accessories for added protection

Adding accessories like pallet racking guards and end-of-aisle barriers can enhance safety significantly, protecting racks from accidental bumps or collisions. Anti-collapse mesh is also valuable, especially in high-traffic areas, as it secures pallets and prevents items from falling into adjacent aisles or storage zones.

See Pallet Racking Guards on Page 126

Staff training and compliance monitoring

A safe racking system depends on an informed team. Routine training on racking safety protocols, such as proper pallet stacking and emergency procedures, ensures employees can handle the system safely. Regular compliance checks also keep your system aligned with safety regulations, helping you stay up-to-date on industry standards and reduce liability risks.

Australian Standards for safe pallet racking systems

To ensure full compliance and safety, adhere to the following Australian Standards relevant to pallet racking:

- ◆ AS 4084.1:2023 – Steel Storage Racking – Design
- ◆ AS 4084.2:2023 – Steel Storage Racking – Operation and Maintenance
- ◆ AS4068:1993 – Flat Pallets for Materials Handling
- ◆ AS4762:2000 – General Purpose Flat Pallets, Principal Dimensions and Tolerances.

Achieving safe, reliable pallet racking

By following these best practices and aligning with Australian Standards, you'll build a secure, compliant pallet racking system that protects your workforce and enhances operational efficiency.

For advice on additional protective solutions or further guidance, **contact Area Safe on 1300 613 880** to help tailor a solution to your needs.

The importance of Machine Guarding

In today's industrial landscape, worker safety is paramount. As machinery becomes more advanced and powerful, effective safety measures become increasingly critical. One of the most crucial safety measures is machine guarding. This blog explores the importance of machine guarding and its benefits, with a special focus on high-quality solutions offered by Area Safe.

Understanding Machine Guarding

Machine guarding involves using protective barriers and devices to shield workers from machinery hazards. These hazards include moving parts, flying debris, electrical issues, mechanical malfunctions, pinch points and crush zones. Additionally, machine guarding prevents unauthorised access to restricted areas, ensuring only trained personnel can operate or maintain machinery. The primary goal is preventing accidents and injuries, ensuring a safe working environment.

See Machine Guarding on
Pages 116-119

The benefits of proper Machine Guarding

Proper machine guarding offers numerous advantages that enhance workplace safety and operational efficiency. Key benefits include:

- ◆ **Injury prevention**
Machine guarding reduces injury risks like cuts, burns, and fractures by preventing contact with dangerous parts and shielding against flying debris.
- ◆ **Regulatory compliance and enhanced reputation**
Adhering to safety standards avoids legal penalties and enhances company reputation, demonstrating commitment to employee well-being.
- ◆ **Increased productivity and equipment protection**
Safe workers operate more efficiently, reducing accident-related downtime. Guards protect machinery from damage, extending equipment lifespan.
- ◆ **Improved morale and operational efficiency**
A safe workplace boosts morale and job satisfaction. Workers perform better and ensure consistent product quality.
- ◆ **Risk Management**
Machine guarding helps identify and mitigate potential hazards before incidents occur.

Area Safe's Surex Machine Guarding solutions

Our Surex Machine Guarding range offers high-quality solutions designed to protect your workforce and comply with industry standards. Products include 1.2m and 2m high mesh panels with optional guarding gates, heavy duty hinges and lockable latches.

Investing in proper machine guarding is essential for any industrial operation. It protects workers, ensures regulatory compliance, and enhances productivity and efficiency. With the right guarding solutions, such as Area Safe's Surex Machine Guarding range, you can create a safer, more productive workplace.

For more information on our products and how they benefit your operations, visit **Area Safe's Surex Machine Guarding** page.

Downpipe Guards

Galvanised Steel Downpipe Protectors

- Industrial 2mm thickness (3mm available - please enquire)
- Galvanised
- Side flanges 50mm wide
- Pre-drilled Ø14 fixing holes
